# 4-Digit Game Code Quick Reference Guide

Beginning September 8, 2024, a 3-digit scratch-off game number will be displayed as a 4-digit game number, and a 6-digit book number will display as 7-Digit Book number, except for the physical ticket. Physical tickets will continue to have a 3-digit game number and 6-digit book number until we run out of 3-digit numbers.

4-digit scratch-off tickets are tentatively scheduled to go on sale in January 2025.

Retailers' current Scratch-Off data will appear differently on terminal screens and reports and manual entry of scratch-off ticket numbers will require additional input.

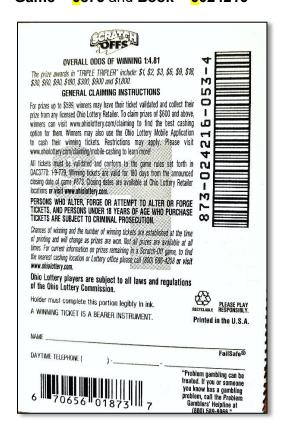

### **Terminal Screen Entry**

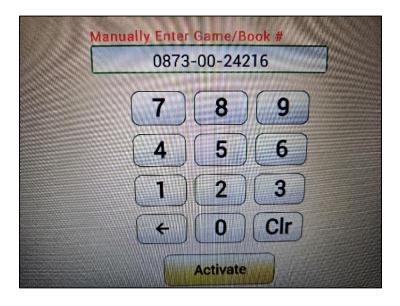

If you are scanning a scratch-off ticket barcode, no action is required, the terminal will read the barcode correctly.

If you are manually inputting a scratch-off ticket you must enter **one leading zero before the game number** and **one leading zero before the book number**.

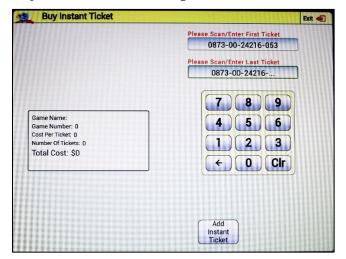

### **Examples**

To manually enter scratch-off ticket 873-024216-053-4 where **Game = 873** and **Book = 024216**. You must enter a leading 0 in front of the game number and the book number. Entry would be  $Game = \frac{0}{873}$  and  $Game = \frac{0}{873}$

# **Terminal Reports**

Scratch-off ticket reports will now show a leading 0 before ethe game number and the book

number.

The Activation and Settlement Receipts shown below – DO NOT INCLUDE a leading 0 for the game number, it is only in the book number. This is because the game number is a part of the name on these receipts. To utilize these receipts, the retailer must add the leading 0 to the game number only – the leading 0 is already included in the book number.
